

Modernizing UX

Smarter Calls, Lower Costs: A Virtual Agent Proposal for Za Pizza

From legacy DTMF to intelligent voice experiences – English & Spanish

Presented By Jai

The Cost of Standing Still

150 agents • 95% human-handled • 3.5/5 CSAT

	<u>Baseline</u>	<u>Goal</u>
AHT (Seconds)	300	↓
Abandonment Rate	15%	↓
Avg. Wait Time (Seconds)	100	↓
CSAT (1-5)	3.5	↑
Agent Handled Rate %	95%	↓
Cost per Contact	\$5	↓

Baseline figures based on Za
Pizza 2025 operational averages

Your Next Six Months with a Virtual Agent

	<u>Baseline</u>	<u>Virtual Agent – Months 1-2</u>	<u>Virtual Agent – Months 5-6</u>
AHT (Seconds)	300	250	175
Abandonment Rate	15%	8%	4%
Avg. Wait Time (Seconds)	100	40	25
CSAT (1-5)	3.5	3.5	4.4
Agent Handled Rate %	95%	65%	40%
Cost per Contact	\$5	\$3	\$2

Baseline figures based on Za
Pizza 2025 operational averages

*Faster calls. Lower costs. CSAT protected
and rising.*

Proven in Pizza

Real Results from Virtual Agents

Our projections are grounded in real results from your industry. These brands are already there:

Industry-wide: AI voice agents now deflect 45–60%+ of inbound customer queries (Freshworks, 2025)

Jets Pizza

92% AI order completion rate
(HungerRush OrderAI, 10M+ orders)

Dominos

70% faster resolution time via virtual assistant
(Yellow.ai)

Taco Bell / Yum Brands

2M+ voice AI orders across 300+ US locations
(Q3 2024 earnings)

Sources: HungerRush/QSR Magazine (Jet's Pizza), Yellow.ai case study (Domino's), Yum Brands Q3 2024 earnings call, Freshworks CX Report 2025

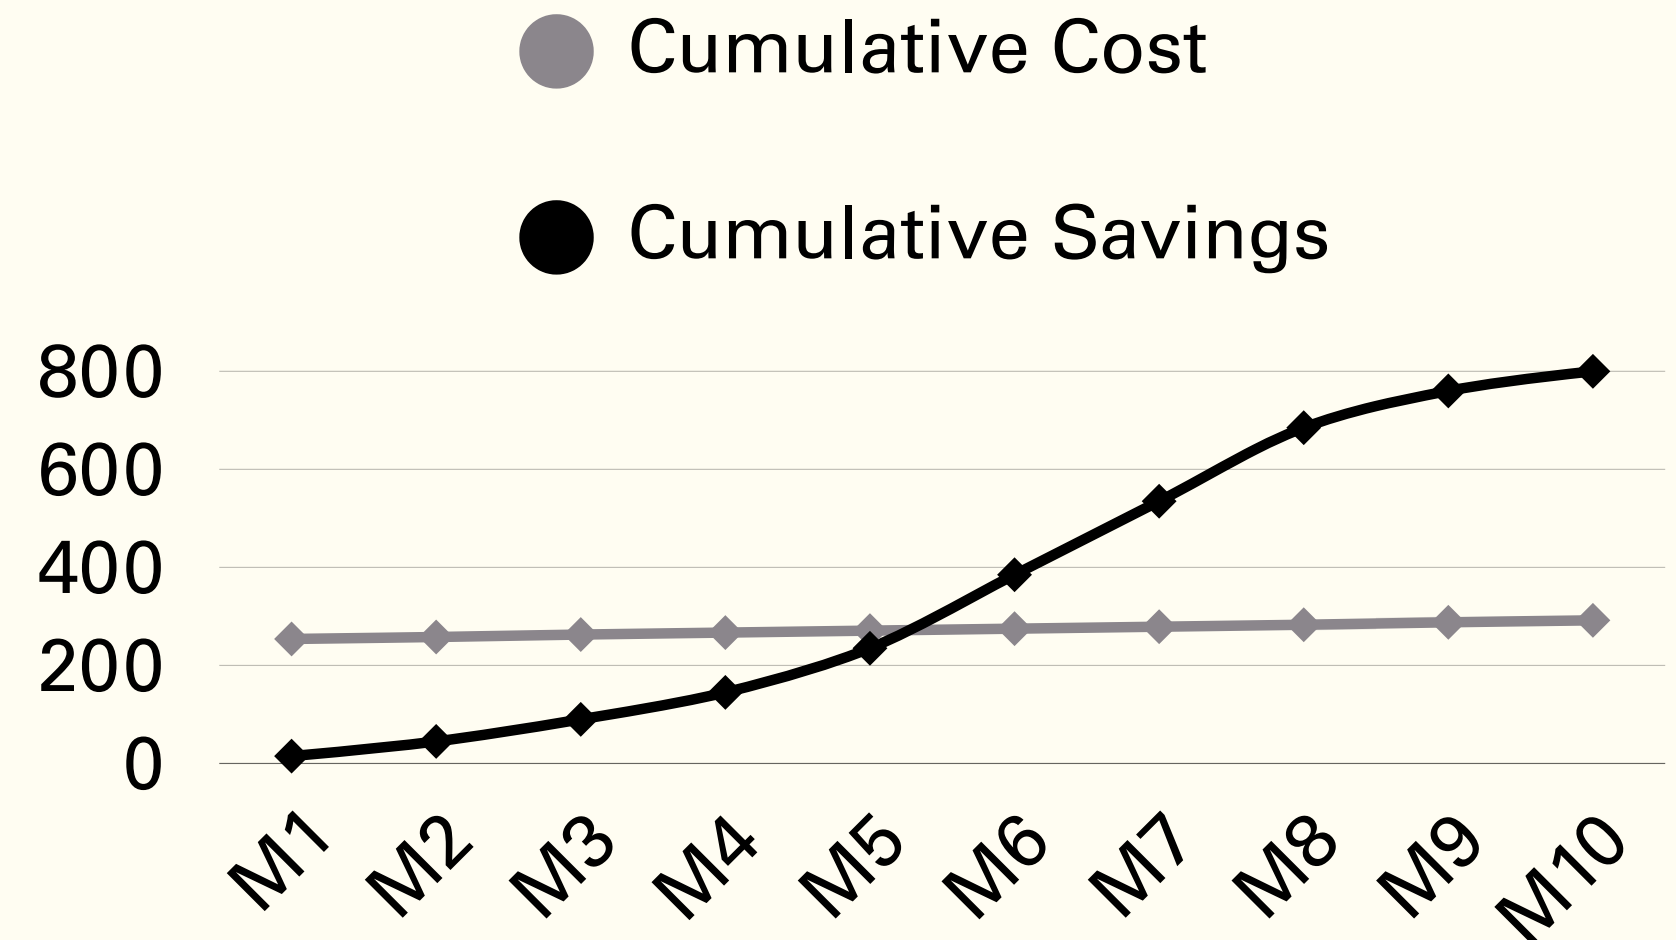

Clear ROI: Financial Impact of Virtual Agent

Investment Overview

Implementation Costs (one-time)	\$250K
Ongoing Annual Costs	\$50K

Projected Annual Benefit (Month 5-6)

- Operating Cost Savings (AHT + deflection): \$2.7M
- Revenue Recovered (reduced abandonment): \$1.0M
- Gross Annual Benefit: ~\$3.7M
- Net Year 1 (after implementation & ongoing costs): ~\$3.4M

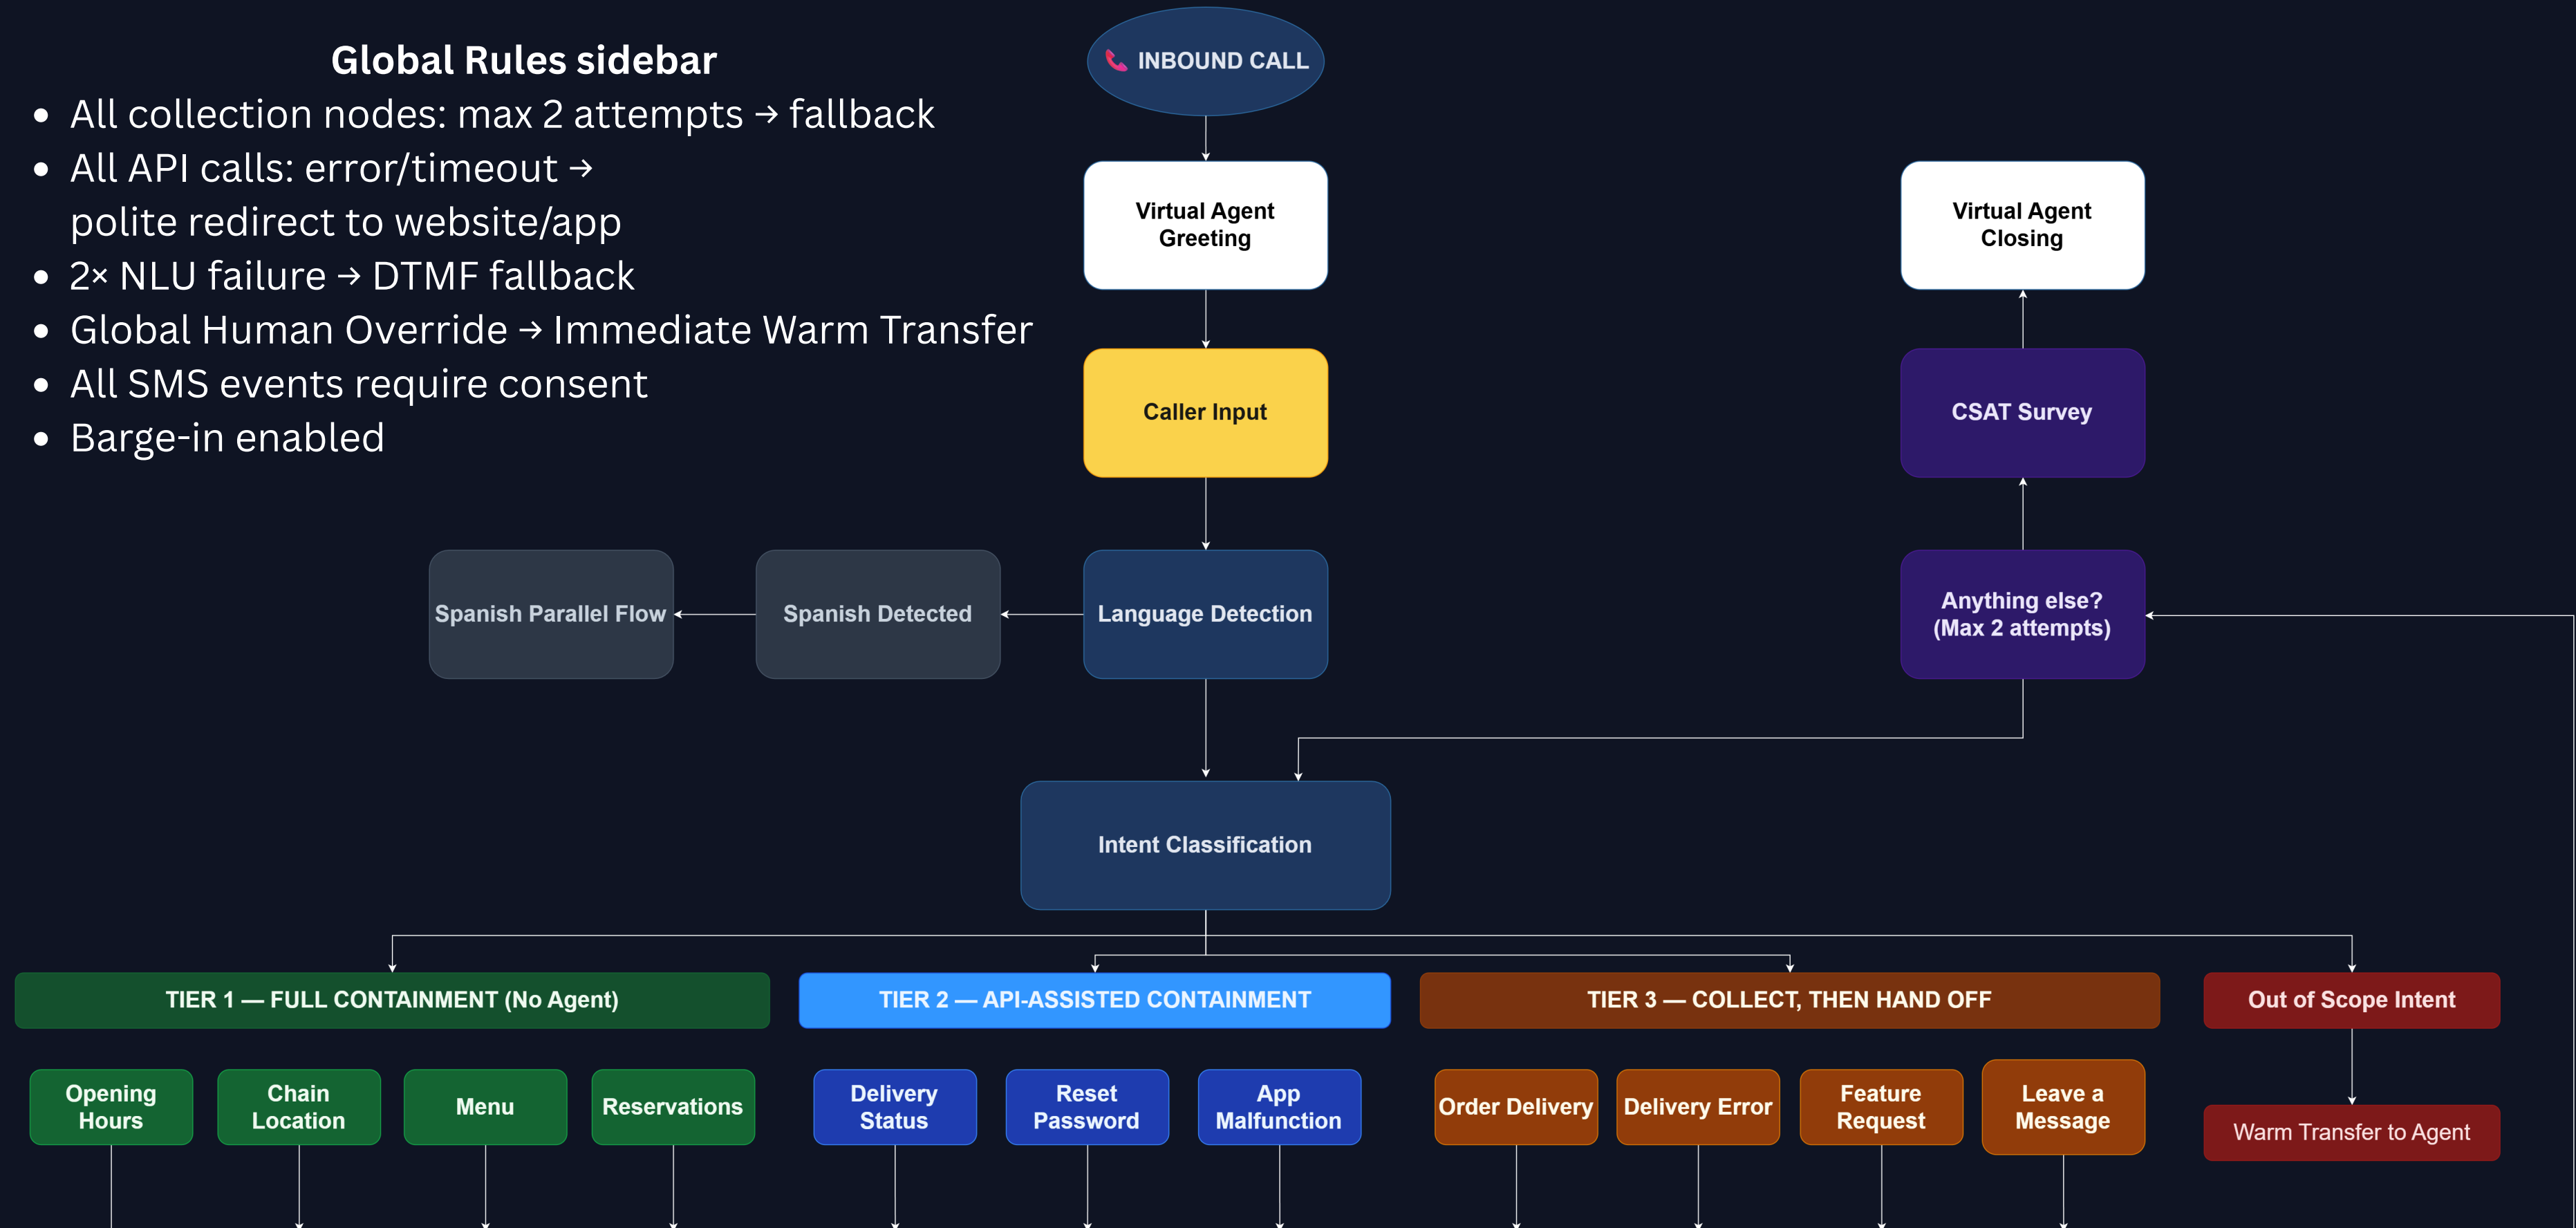

Based on Za Pizza current scale: ~75,000 monthly calls (150 agents), \$5 baseline cost per contact, and POC performance data. Revenue recovery assumes ~\$25 average order value and 40% conversion on recaptured calls. Conservative estimate shown; actual results depend on adoption and call mix (English/Spanish).

Architecture Overview

Global Rules sidebar

- All collection nodes: max 2 attempts → fallback
- All API calls: error/timeout → polite redirect to website/app
- 2× NLU failure → DTMF fallback
- Global Human Override → Immediate Warm Transfer
- All SMS events require consent
- Barge-in enabled

Tier 1: Full Containment

Intent 1: Opening Hours

Legend

How it works

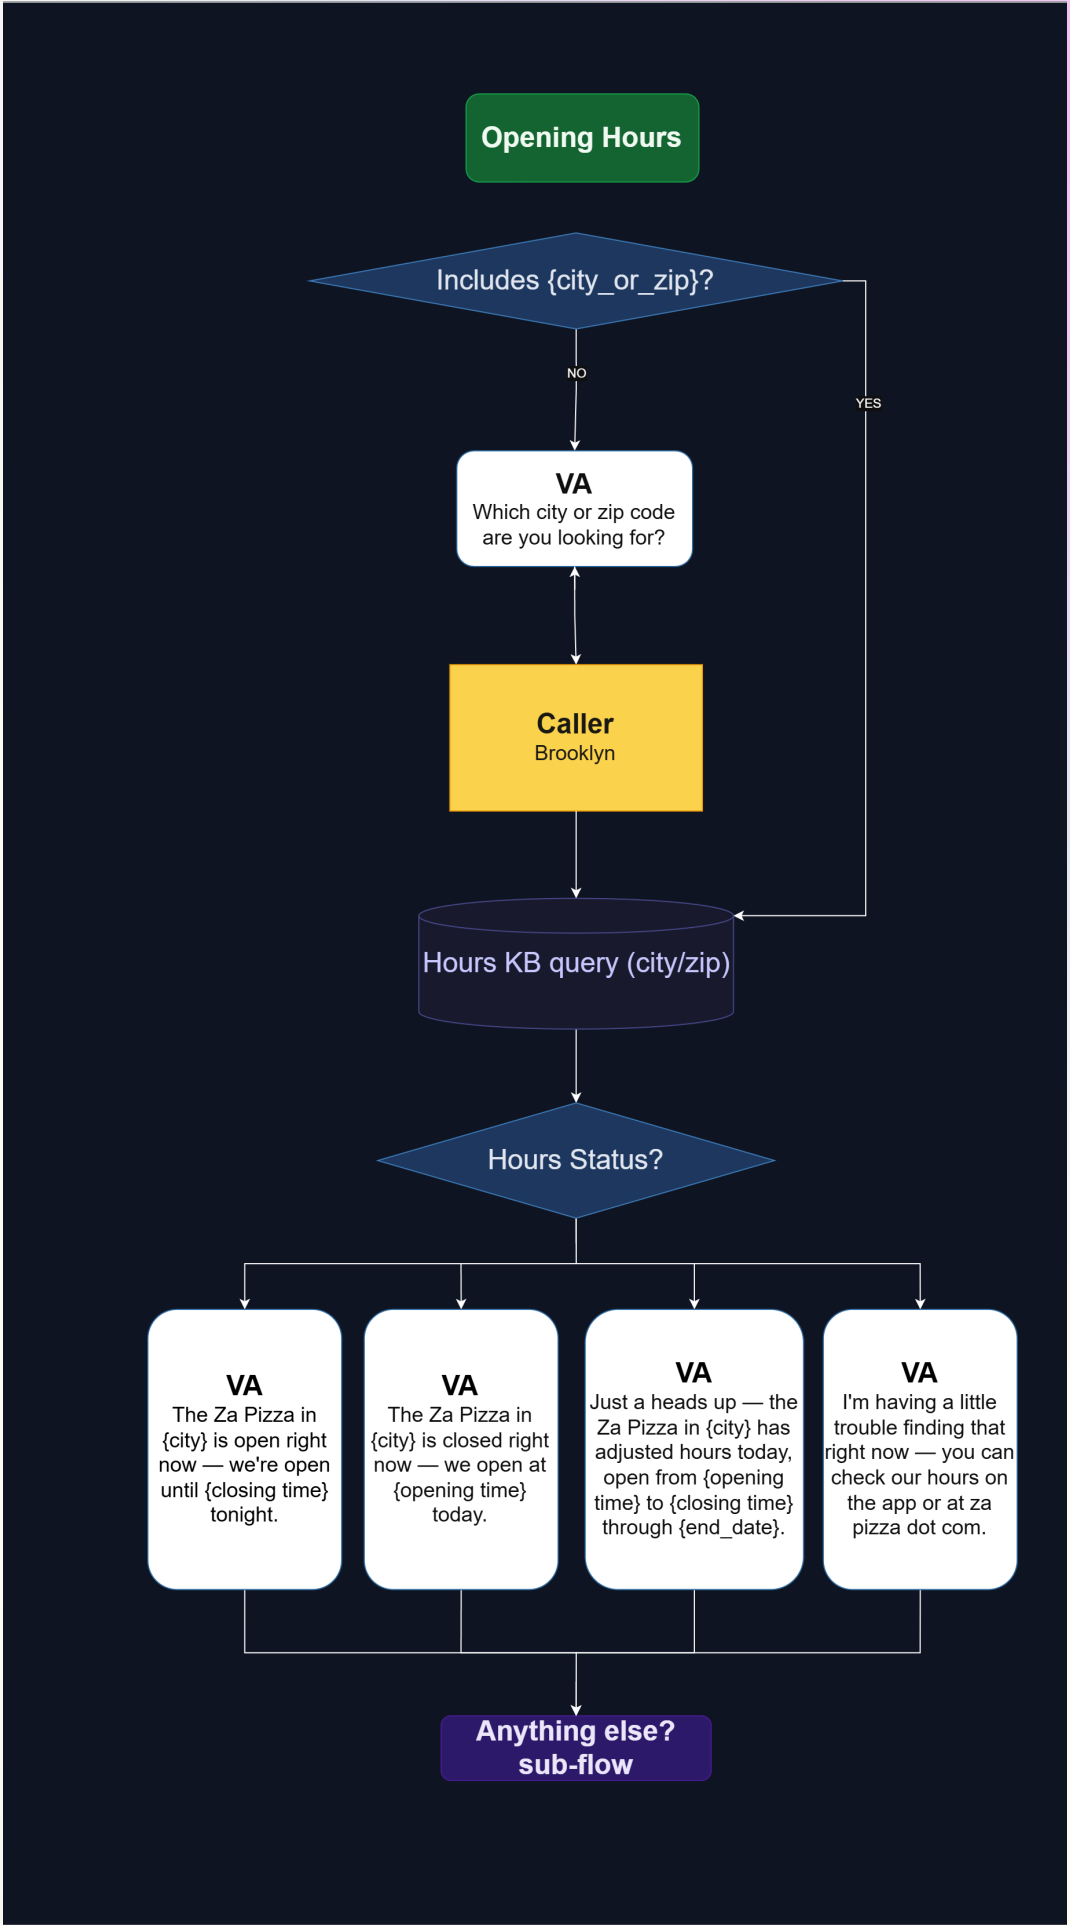

- VA collects city/ZIP if not provided, queries Hours Knowledge Base
- Returns one of four statuses: Open, Closed, Adjusted Hours, Not Found
- Not Found → redirects to app or website
- 2x failure → DTMF fallback

Integrations

- Hours Knowledge Base
- Location/Branch Database

Parameters

{city_or_zip},{closing_time}, {opening_time}, {end_date}

Tier 1: Full Containment

Intent 2: Chain Location

Legend

How it works

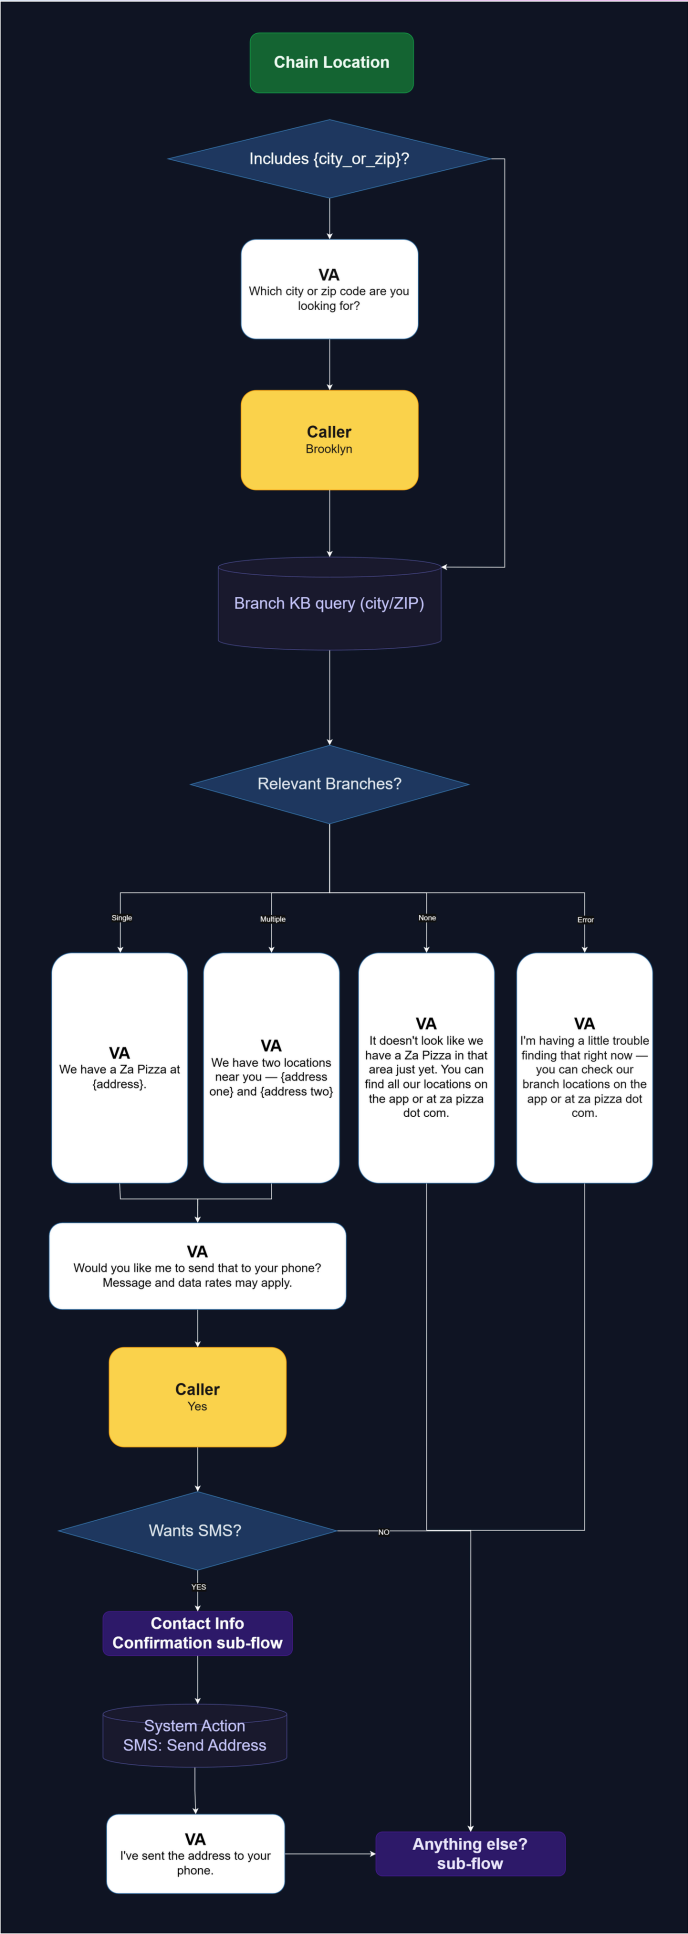

- VA collects city/ZIP if not provided, queries Branch Knowledge Base
- Returns Single, Multiple, or No locations found
- If found → offers to SMS address to caller
- Error/None → redirects to app or website

Integrations

- Branch/Location Knowledge Base
- SMS Gateway
- Contact Info Confirmation sub-flow

Parameters

{city_or_zip},{address}, {address_one}/{address_two}, {caller_number}

Tier 1: Full Containment

Intent 3: Menu

Legend

How it works

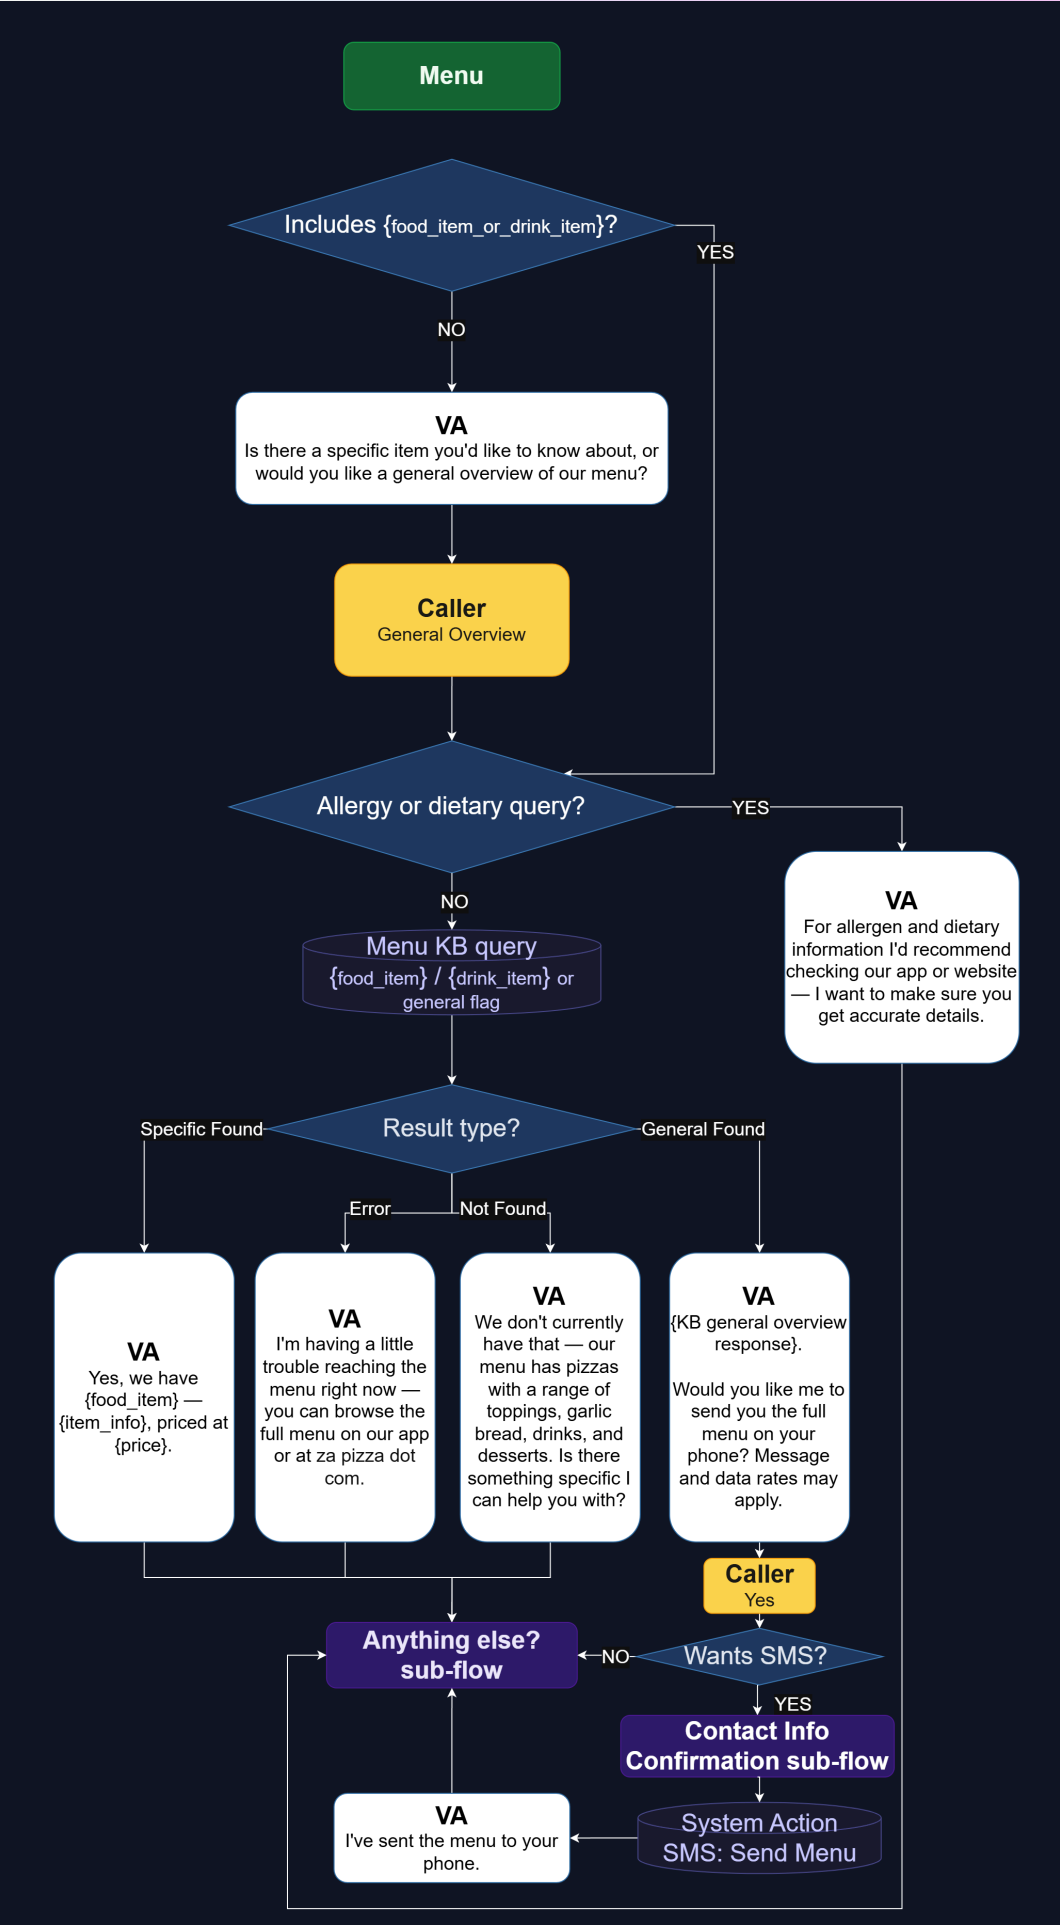

- VA checks if specific item mentioned; if not, asks specific or general overview
- Allergy/dietary queries → redirected to app/website for accuracy
- Returns specific item info, general overview, or Not Found
- General overview → offers to SMS full menu to caller

Integrations

- Menu Knowledge Base
- SMS Gateway Contact Info Confirmation sub-flow

Parameters

{food_item}/{drink_item}, {item_info}/{item_price}

Tier 1: Full Containment

Intent 4: Reservation

Legend

How it works

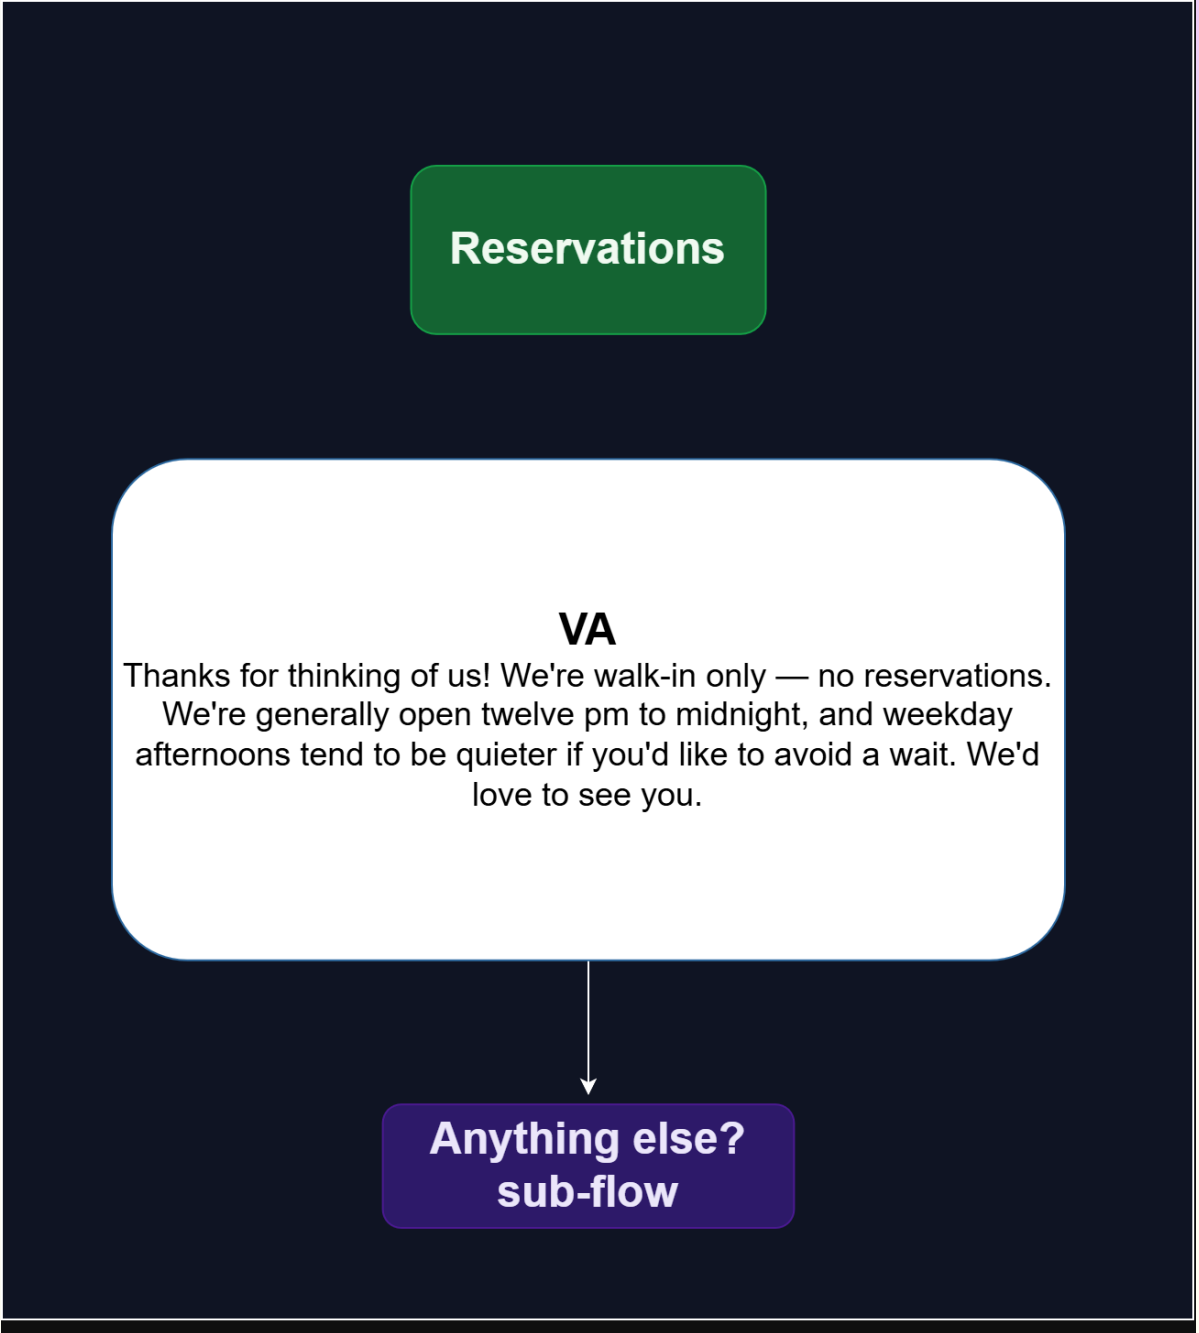

- Caller asks about reservations → single VA response
- Informs caller: walk-in only, open 12pm–midnight
- Advises weekday afternoons are quieter
- No: data collection, branching, agent needed

Integrations

- None

Parameters

None

Tier 2: API Assisted Containment

Intent 5: Delivery Status

Legend

How it works

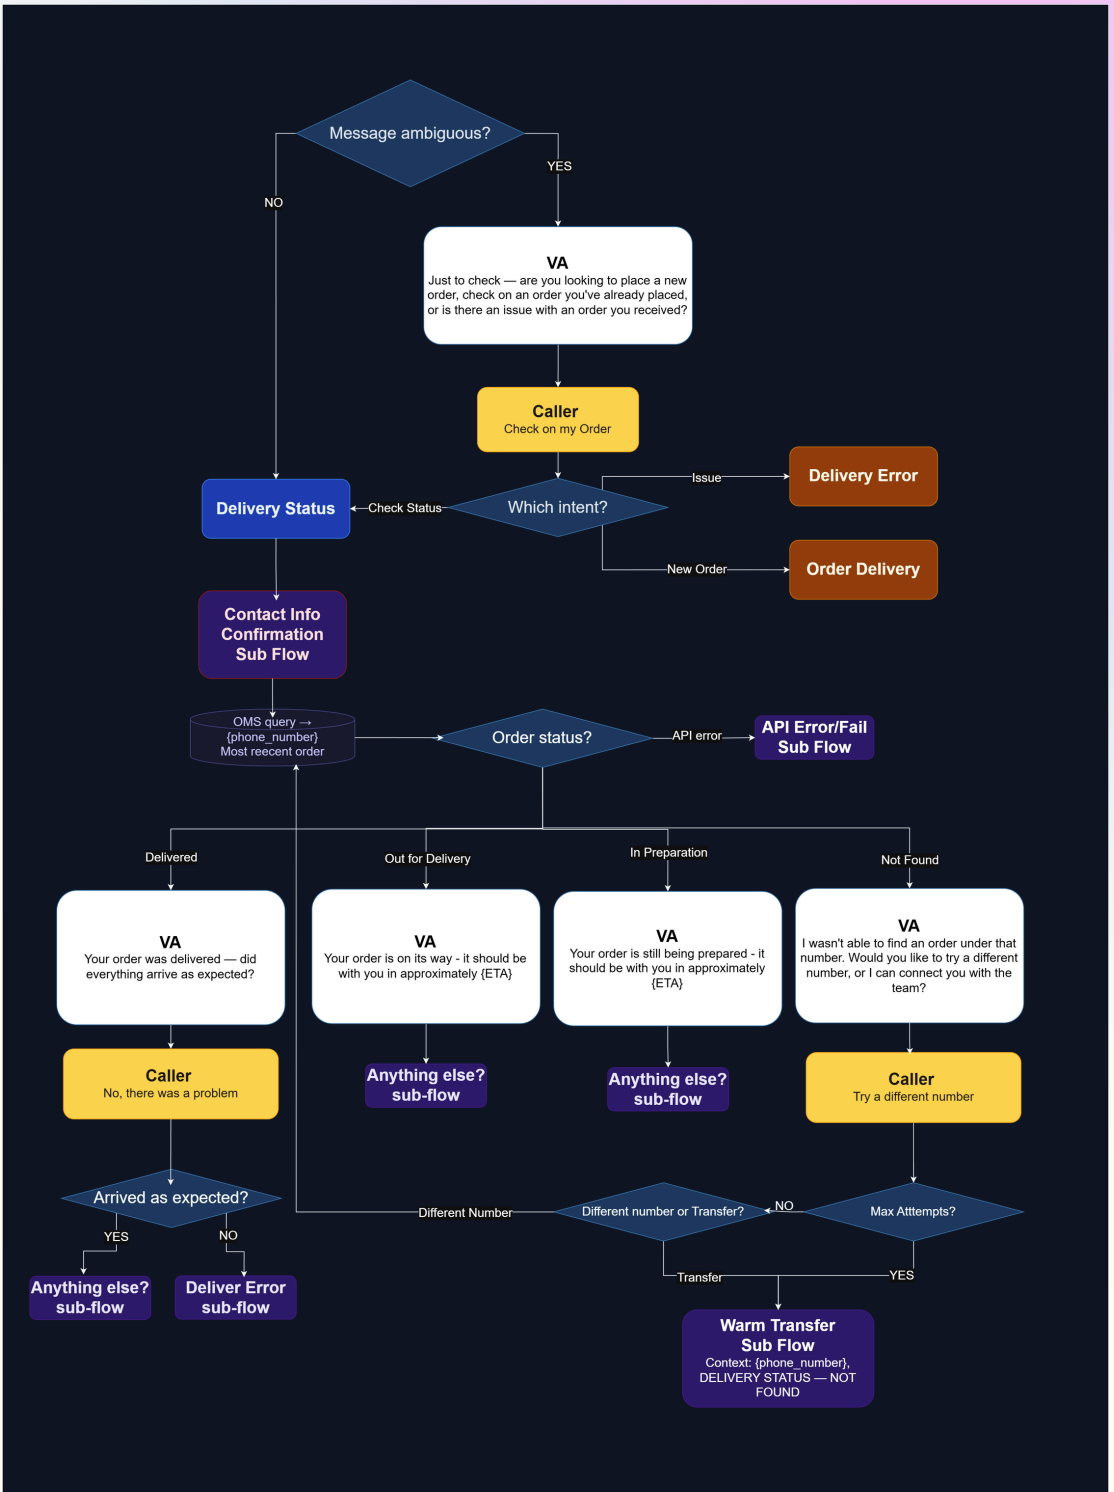

- VA collects phone number, queries OMS for most recent order
- Returns four statuses: Delivered, Out for Delivery, In Preparation, Not Found
- Delivered but problem reported → routes to Delivery Error sub-flow
- Not Found → retry with different number or Warm Transfer to agent

Integrations

- OMS API
- Sub-Flow: Warm Transfer, API Error/Fail, Delivery Error, Order Delivery

Parameters

{phone_number}, {ETA}, {order_status}

Tier 2: API Assisted Containment

Intent 6: Reset Password

Legend

How it works

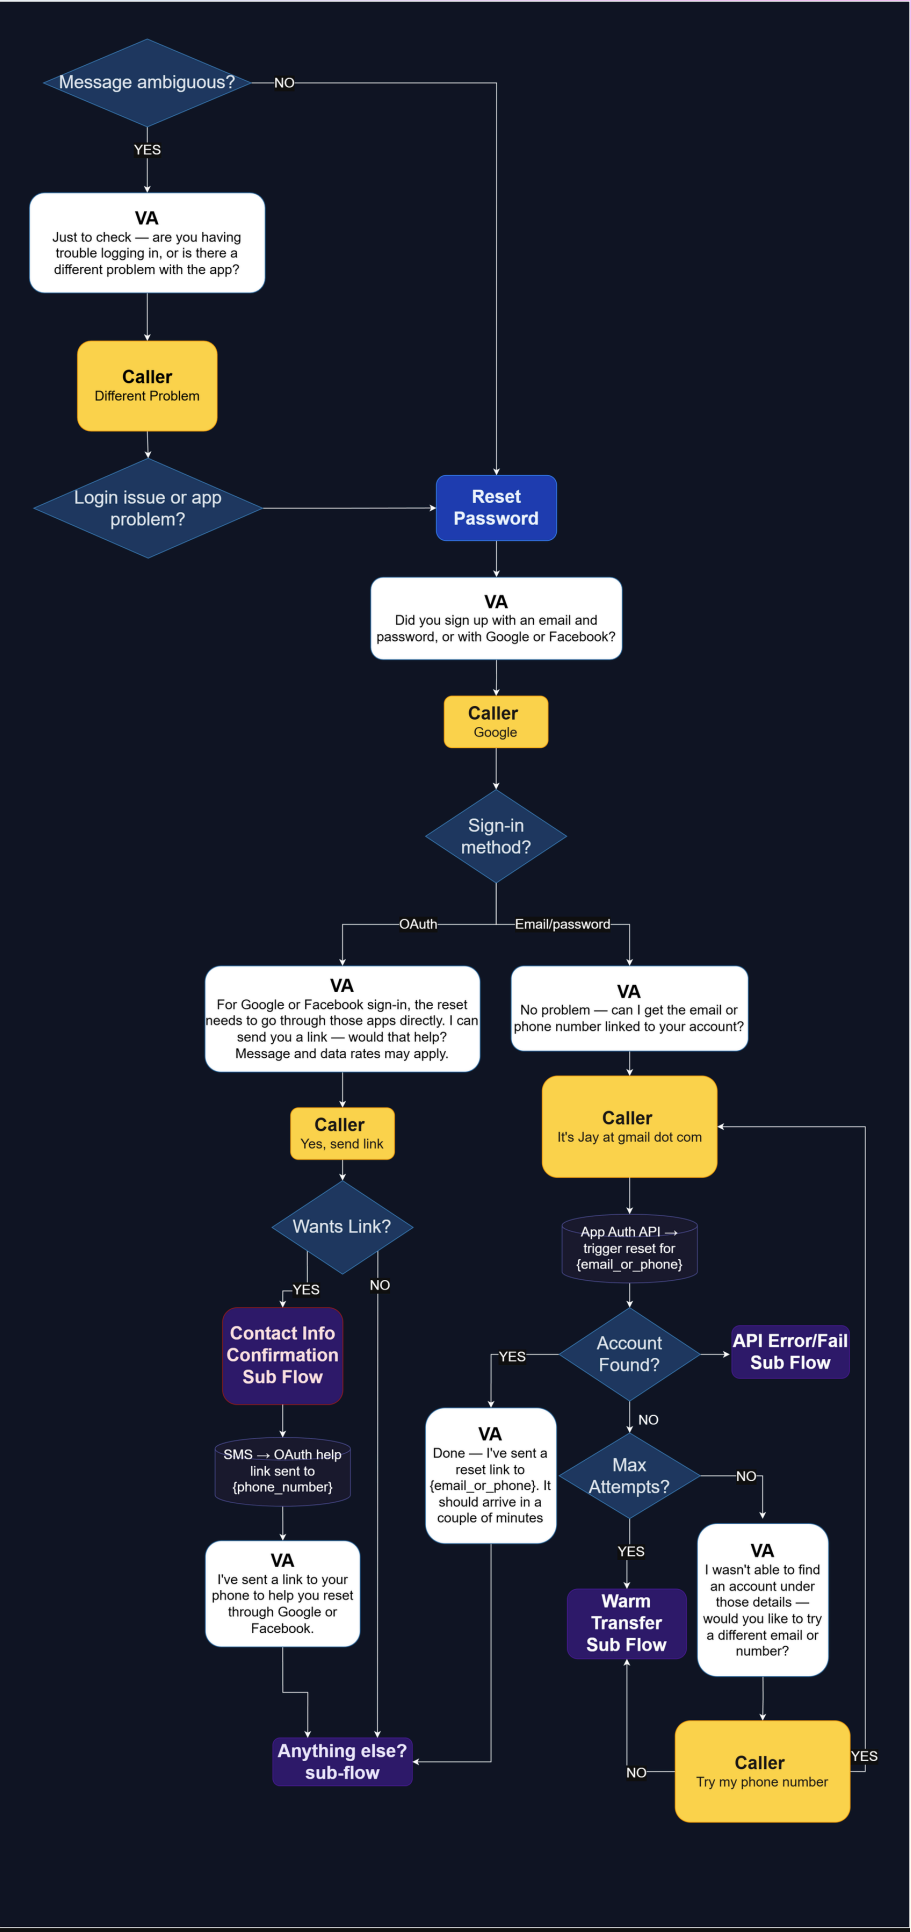

- VA identifies sign-in method: OAuth (Google/Facebook) or email/password
- OAuth → sends help link via SMS; Email/password → triggers reset via App Auth API
- Account not found → allows retry with different email or phone number
- Max attempts or API failure → Warm Transfer to agent

Integrations

- App Auth API
- SMS Gateway
- Sub-Flows: Contact Info Confirmation, Warm Transfer, API Error/Fail

Parameters

{sign_in_method}, {email_or_phone}, {phone_number}

Tier 2: API Assisted Containment

Intent 7: App Malfunction

Legend

How it works

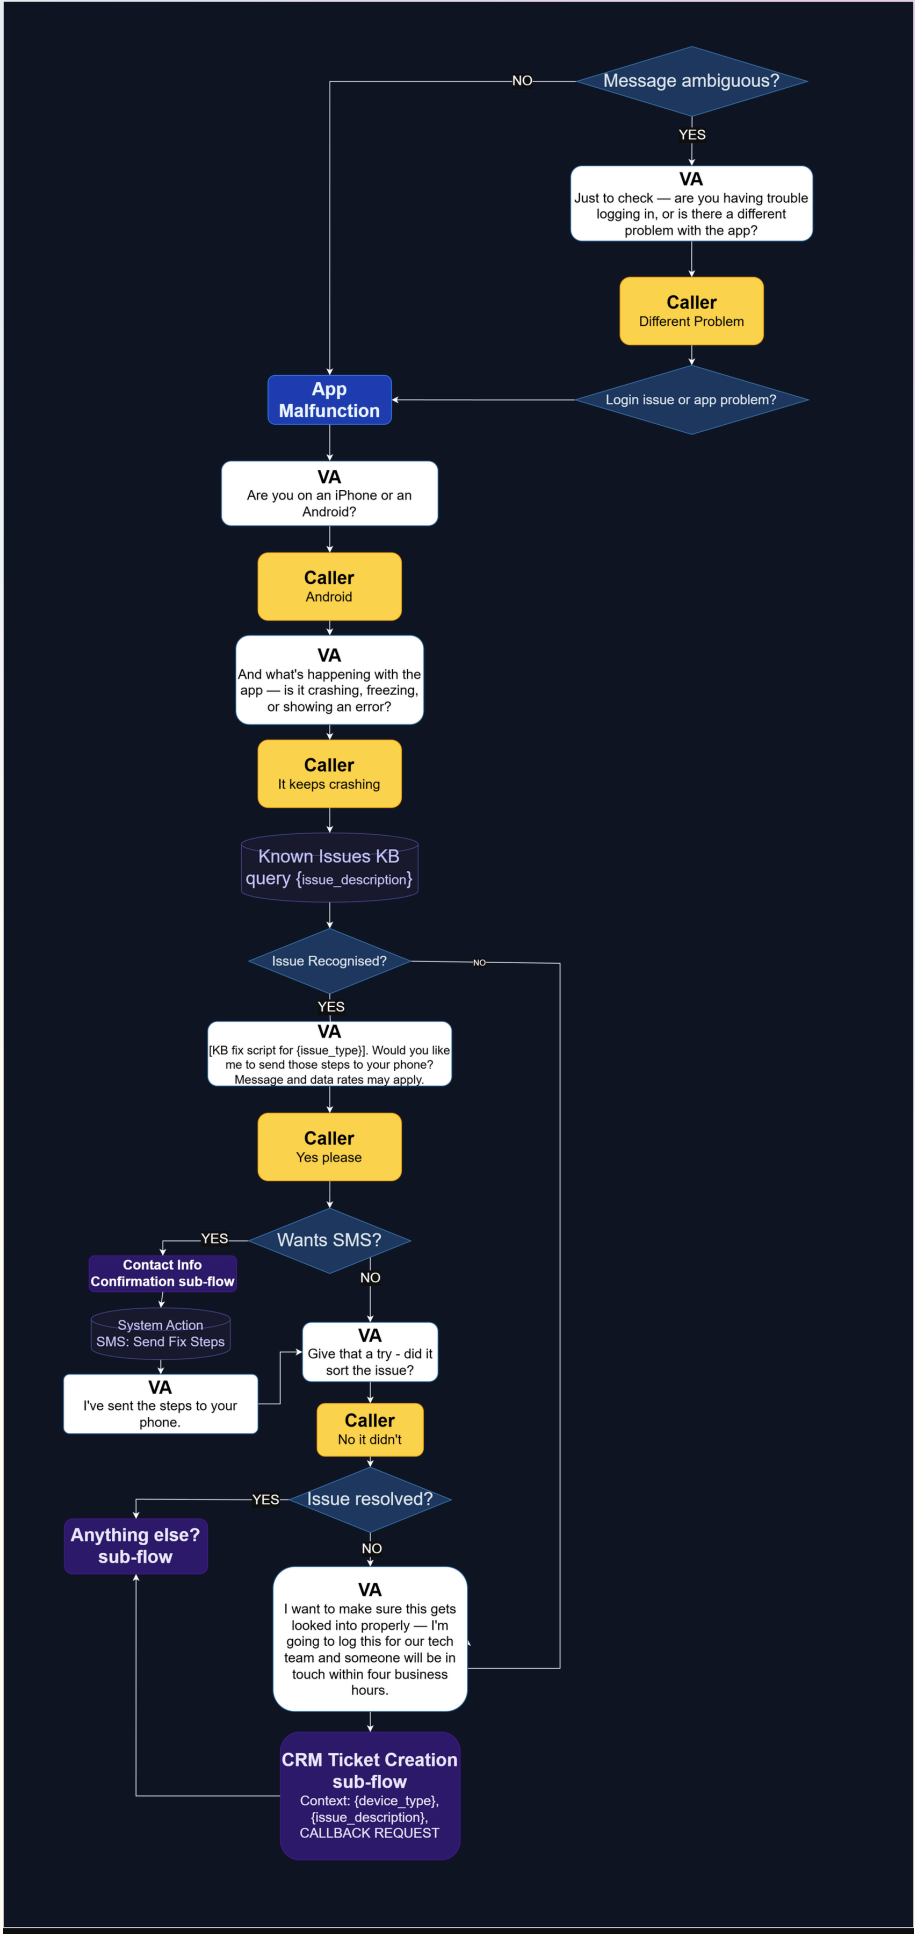

- VA collects device type and issue description, queries Known Issues KB
- If recognized → provides fix steps, offers to SMS to caller
- If unresolved or unrecognized → logs CRM ticket, callback within 4 hours
- Ambiguous intent → VA clarifies before entering flow

Integrations

- Known Issues Knowledge Base
- CRM Ticket Creation sub-flow
- SMS Gateway
- Contact Info Confirmation sub-flow

Parameters

{device_type}, {issue_description}, {issue_type}

Tier 3: Collect, Then Handoff

Intent 8: Order Delivery

How it works

- After-hours check first → After Hours sub-flow if outside 12pm–midnight
- VA clarifies delivery or pickup, collects contact info and order items
- Delivery → confirms address, checks delivery zone; outside zone → offers pickup
- Order confirmed → upsell attempt, then Warm Transfer for payment/completion

Legend

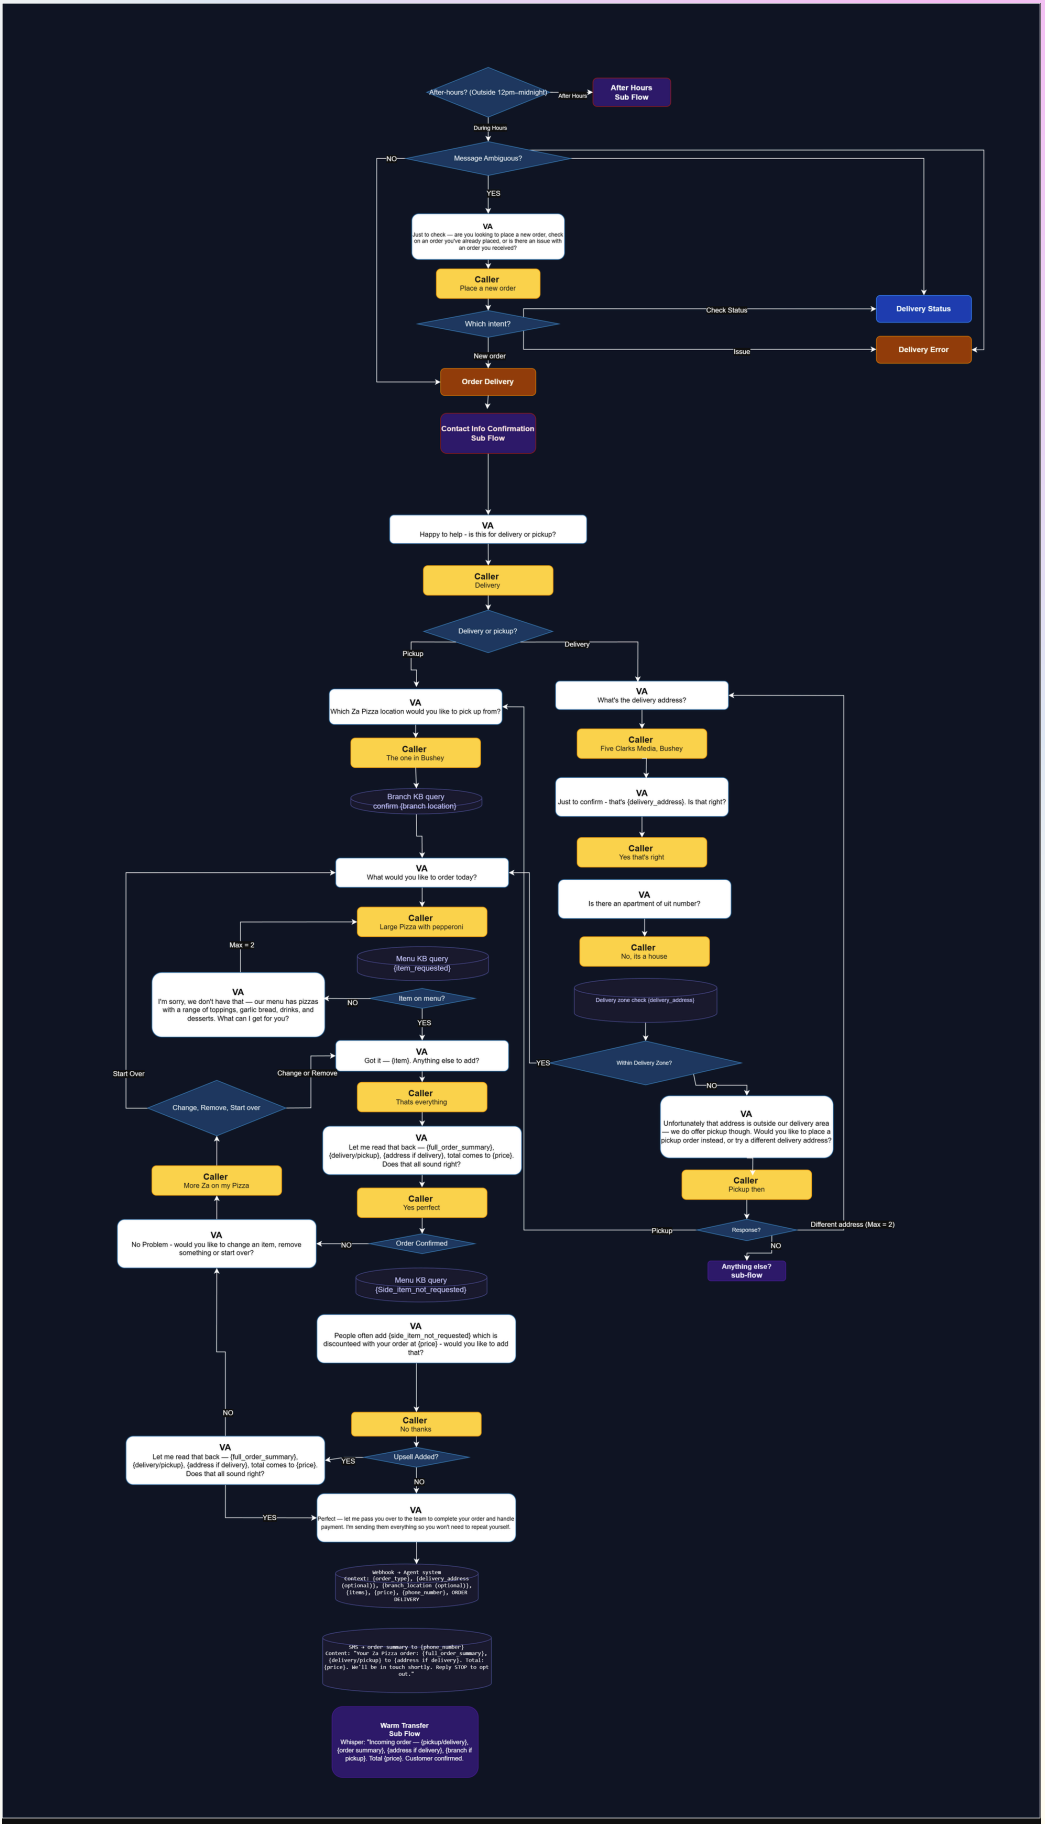

Integrations

- Knowledge Base: Menu, Branch
- Delivery Zone Check API
- OMS/Order System
- Sub-Flows: Warm Transfer, Contact Info Confirmation

Parameters

{delivery_address} / {branch_location}, {items} / {price}, {order_summary}, {phone_number}

Tier 3: Collect, Then Handoff

Intent 9: Delivery Error

How it works

- VA collects contact info and issue description, classifies error type via KB
- Two error types: missing items or wrong total
- VA collects affected items → passes full context to agent via Warm Transfer
- Agent receives whisper with error type and items — caller never repeats themselves

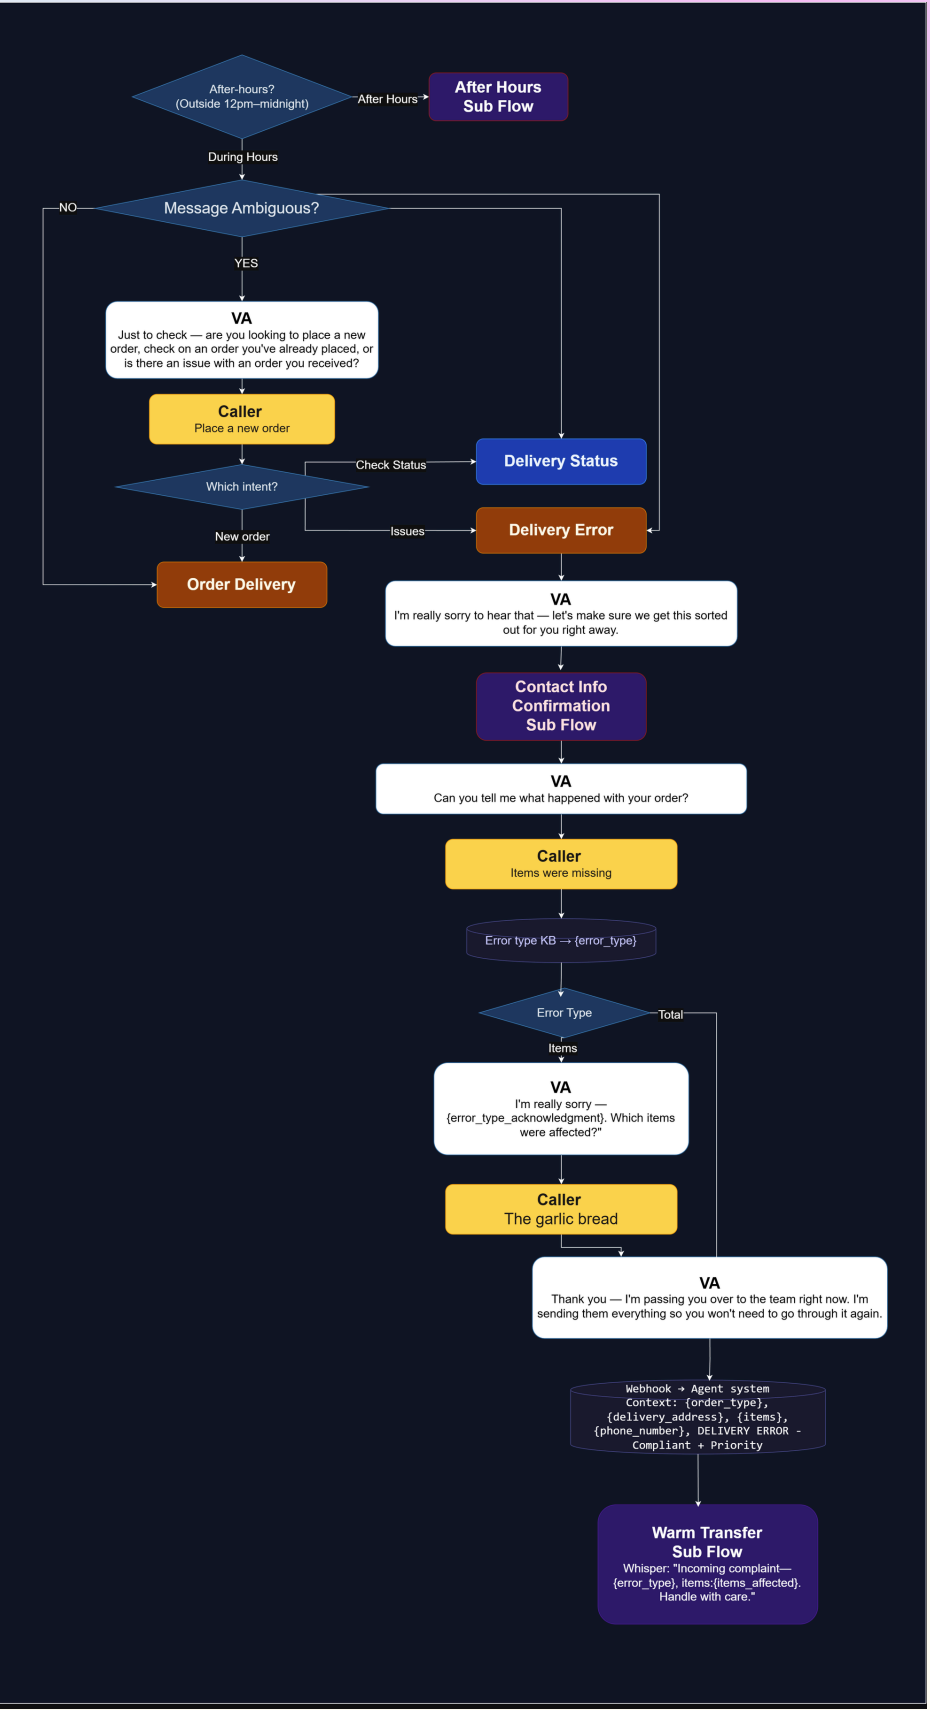

Integrations

- Error Type Knowledge Base
- Webhook → Agent system
- Contact Info Confirmation sub-flow
- Warm Transfer sub-flow

Parameters

{delivery_address} / {phone_number}, {error_type},
{items_affected}, {order_type}

Legend

Tier 3: Collect, Then Handoff

Intent 10: Feature Request

Legend

How it works

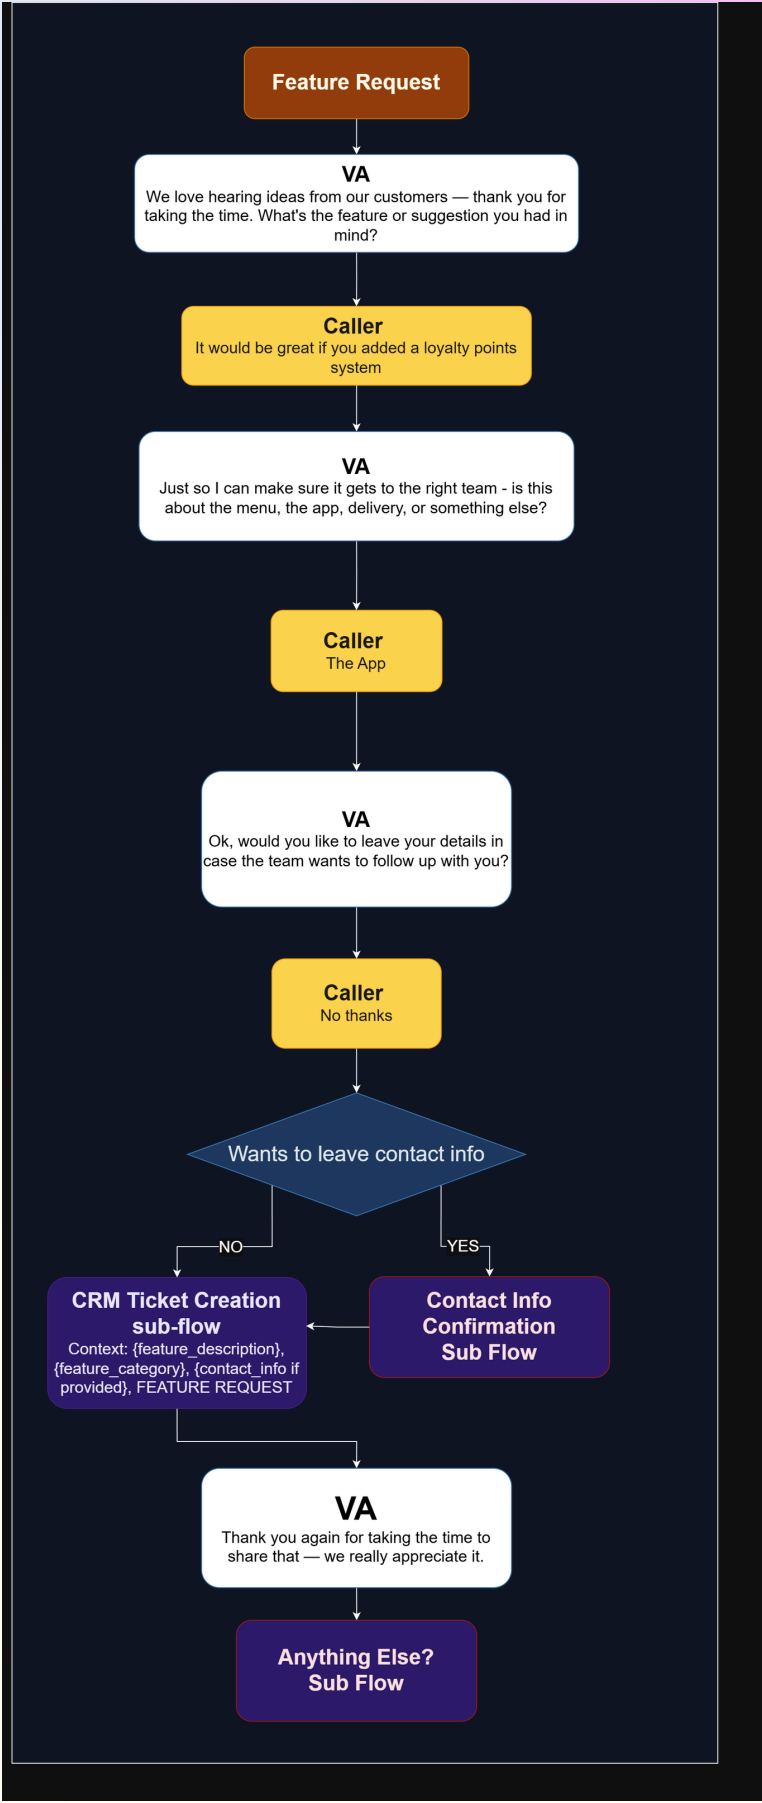

- VA collects feature description and categorises by area (menu, app, delivery, other)
- Optionally collects contact info for follow-up
- CRM ticket created with full context regardless of contact preference
- No agent needed — fully contained

Integrations

- CRM Ticket Creation sub-flow
- Contact Info Confirmation sub-flow

Parameters

{feature_description}, {feature_category}, {contact_info}

Tier 3: Collect, Then Handoff

Intent 11: Leave a Message

Legend

How it works

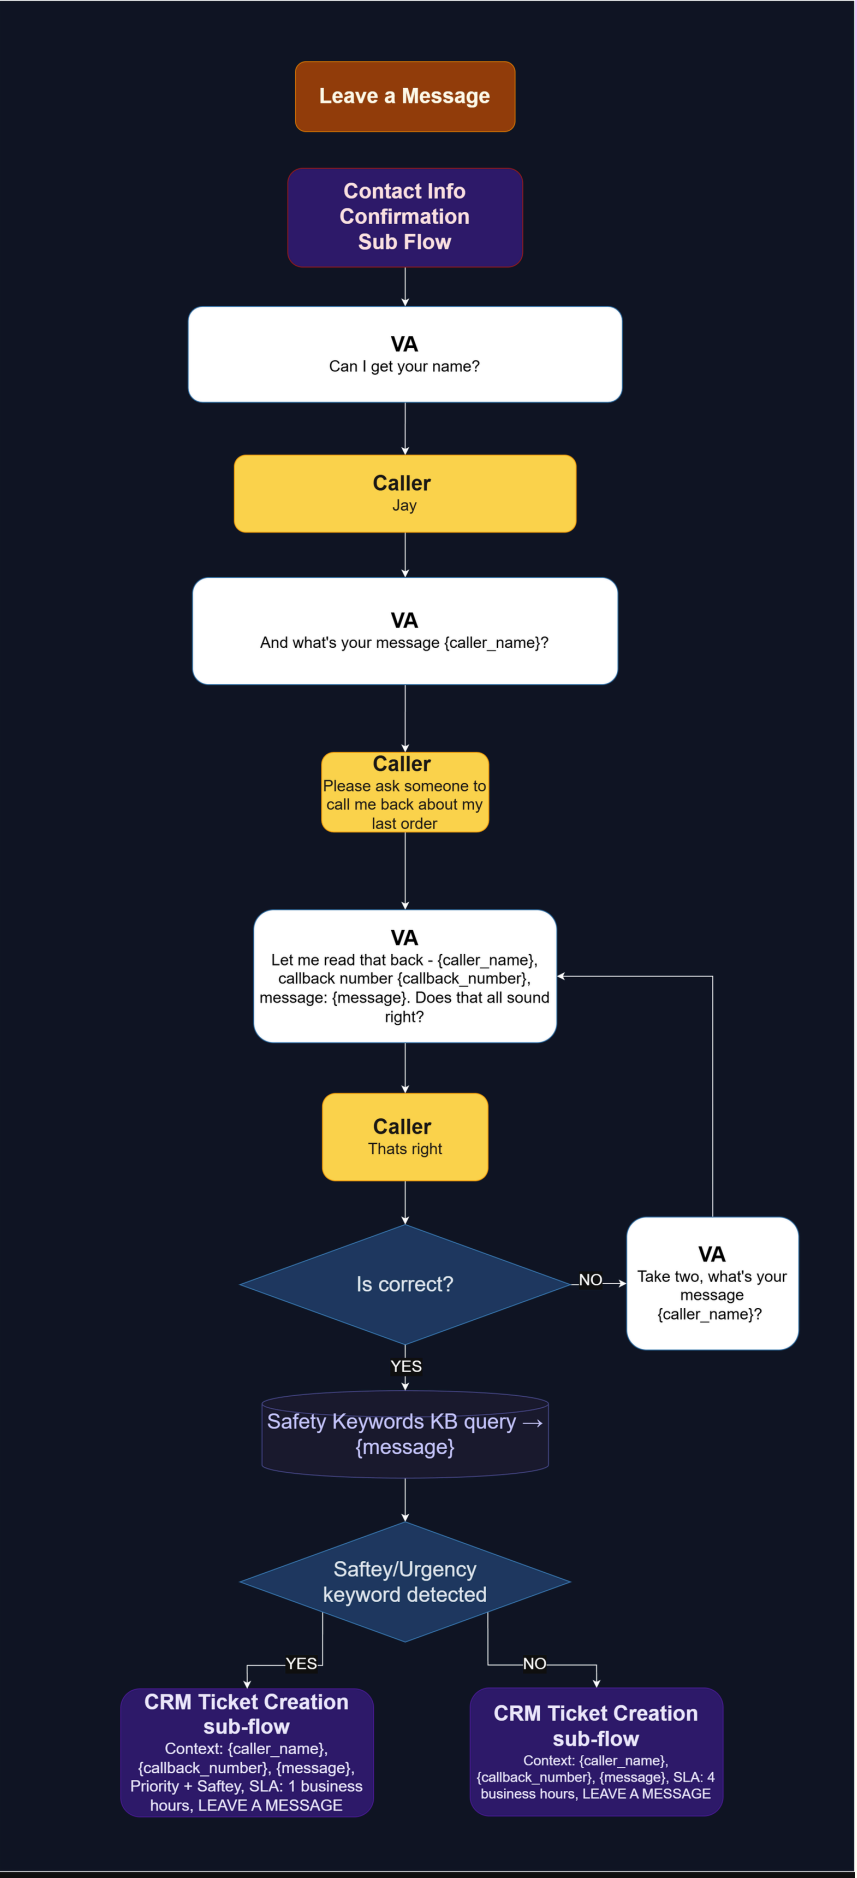

- VA collects name, callback number, and message — reads back for confirmation
- Message scanned for safety/urgency keywords
- Urgent → CRM ticket created, SLA: 1 business hour
- Standard → CRM ticket created, SLA: 4 business hours

Integrations

- Safety Keywords Knowledge Base
- CRM Ticket Creation sub-flow
- Contact Info Confirmation sub-flow

Parameters

{caller_name}, {callback_number}, {message}

The Growth Roadmap

Personalization & Loyalty

Repeat caller recognition, previous order surfacing, one-click reorder, loyalty auto-applied

~15–20% increase in repeat order rate →
est. +\$400K–600K/year revenue uplift

Proactive Outreach

OMS-triggered outbound status updates, eliminates inbound delivery status calls before they happen

Removes ~15–25% of total inbound volume → ~\$150K–240K/year additional savings

Autonomous Error Resolution

VA validates complaints against OMS, issues instant credit/coupon without agent

Eliminates highest-cost call type → ~\$80K–120K/year + CSAT protection

Live Intelligence

Real-time busyness query, kitchen-load aware ETA, POS/KDS direct integration

Reduces post-order anxiety calls ~10% → ~\$50K–75K/year

Platform Consolidation

Migrate legacy DTMF to Vonage – single platform, lower licensing, seamless

~\$120K–180K/year in platform cost savings

Next Steps

Approve Phase 1 Budget: \$250K

Confirm IT/System Access

Assign internal project owner (IT + Ops lead)

Timeline: Sign off by April → Go-Live by May
